

Description	
Circuit for automatic chicken door	
Drawn By	Fileark
Date	2011 12 04
Company	http://Fileark.com
Rev	01.00

Notes:
 I used an arduino clone for my circuit but for clarity I will just use the Duemilanove for this schematic
 This circuit uses a light dependant resistor to trigger a timer which after a delay will open or close a door
 it shuts in the chickens at night and lets them out when it is light. there is test mode and manual override switches
